Aided
Dispatch

FEATURES

- ← Automated Vehicle Locator
- ← Command Line and Graphical Dispatch Capabilities
- ← Mapping Integration
- ← Business & Alarms Subsystem
- ← Unit Recommendation Subsystem
- ← Premise/Alert and Hotspots Subsystems
- ← Integrated Statistical Reporting

BENEFITS

Easy to Use. CAD simplifies the call taking and dispatching functions. This enables communication centers to increase productivity and reduce response times.

Increased Officer Safety. Responding units know instantly about previous events, hazardous materials, or other dangers that may exist at a location. Our CAD system is designed to increase officer safety by providing instantaneous information to communication centers and field personnel.

Adaptable. Multiple jurisdictions can share data for greater consistency and accuracy – CAD provides a full-featured multi-jurisdictional system for police, sheriff, fire, rescue, and EMS departments.

Increased Efficiency & Reduced Response Times. Information entered once is accessible across all applications. In addition, the Phase II compliant engine provides a quick point of reference to help dispatchers locate officers closest to an event.

Connect Your Community to the Right Resources with OSSI CAD

Protecting your community is the core safety solution provided by SunGard's OSSI Computer-Aided Dispatch (CAD). Our CAD system simplifies operations while providing a fast and reliable solution for your communication centers to dispatch and monitor calls for patrol, fire, and medical units.
