Mobile Suite

When critical information is needed right away, SunGard's OSSI Mobile Product Suite is the system you can depend on to deliver information, when and where it's needed. The OSSI Mobile Product Suite is a feature-rich toolset that integrates a flexible Mobile Computing, Mobile Field Reporting, and Message Switch system into a simple, easy-to-use package.

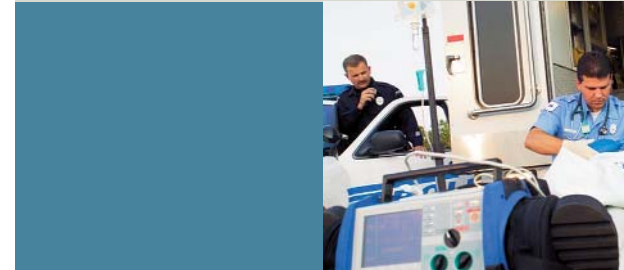

Mobile Computing. Put the power of information at the responders' fingertips with SunGard's OSSI Mobile Computing. Not only does our wireless-enabled technology allow mobile users to interact with SunGard's OSSI Computer Aided Dispatch, it improves efficiency in the field as well as in the office.

Mobile Field Reporting. Efficiently generate and submit incident, supplement, field contact, and accident reports in the field. Once completed and approved, the reports are wirelessly submitted to the agency's record management system where the reports become accessible and searchable.

Message Switch. With SunGard's OSSI Message Switch application, agencies are equipped with technology to exchange information without utilizing voice channels over radio networks.

FEATURES

Integrated Mapping. Provide geographic analysis and visual reference to field personnel. Using the same map engine as CAD, real-time graphical representation of officers' locations and call information is available in Mobile Computing. When coupled with Automatic Vehicle Locator (AVL), dispatchers can easily locate officers closest to an event, and search and plot historical events.

Speech Technology. With this truly hands-free and eyes-off interface, speech synthesis technology queries and translates text-format information to audible responses.

Handheld Technology. Have the freedom of portability without compromising the need for functionality. Handheld Mobile provides capabilities for voiceless dispatch, status updates, car-to-CAD messaging, car-to-car messaging, and queries to access information, including local, state and national warrant checks, stolen vehicle and property information, mugshots, and records management information.

Secure Access to Reports. Secure, remote access helps agencies with workflow and maintains report integrity.

Extensive Report Modules. Accident, arrest, field contact, incident, canine, parking tickets, racial profile, traffic summons/citations, and supplements are available.

Wirelessly Connect Field Personnel to Information With SunGard's OSSI Mobile Suite

SunGard's OSSI Mobile System gives you more flexibility in the field with Mobile Computing, Mobile Field Reporting, and Message Switch applications. The simple, easy-to-use package works for you to enhance communication between dispatchers, law enforcement, and firefighters.

BENEFITS

Increased Officer Safety. Officers can quickly alert dispatchers and other officers to potentially dangerous situations with OSSI Mobile.

Maximized Resource Efficiency. Reduce dispatchers' workload by allowing mobile users to perform tasks, including status updates, CAD history queries, and monitor other unit activity. Automate the time-consuming tasks of completing reports in the field. Names, images, and vehicle records in the agency's RMS are automatically downloaded into the report, reducing the need for redundant data entry.

Immediate Information Availability. Retrieve information directly from Records Management System, NCIC, Regional Data Sharing, and NFIRS.

Improved Report Quality. Several quality assurance tools, such as automated master name validation and IBR and UCR validation at the report level, improve reporting accuracy and quality.
