- State-Specific IBR/UCR Reporting
- UCR Property Management
- Wanted/Warrants

Interfaces with other applications

- SunGard HTE Courts
- CourtWare Court Management System
- INCODE Courts
- Utility Data Systems Courts

BENEFITS

Easy to Use. Powerful, easy-to-use search capabilities help retrieve records, even with a limited amount of information. The same interface used for data entry is also used for searches.

Valuable Investigative Tool. Connect all information related to a subject or location, such as names, businesses, vehicles and criminal activity, thus enhancing computer-aided investigations.

Crime Analysis & Mapping Tools. Easily map incidents, locations, and events, and also perform predictive analysis for future crimes. With the mapping feature, agencies are able to identify high-crime areas within a defined area, saving personnel hours of time-consuming research and mapping.

Case Management. With information at their fingertips, investigators can view all related records for open cases, create photo lineups, perform State/NCIC and P2P queries, and view CAD event history, increasing productivity and accountability. Supervisors can monitor case workloads and progress, as well as view the “big picture” for all cases.

Connect Personnel to Key Information with OSSI RMS

Offering a comprehensive database on persons, businesses, vehicles, criminal activity, and more, SunGard's OSSI Records Management System (RMS) is a powerful tool in protecting your community. Our RMS system properly records and stores all information gathered during the course of an incident investigation. This process not only enables officers to protect the community they serve, but also promotes officer safety by providing the right information at the right time.
