

## Assessment Builder

Quality local assessments are essential to measuring educational performance. Assessment Builder gives educators a simple way to create, score and analyze local benchmark assessments. With Assessment Builder, local benchmark assessments become powerful tools used to guide instruction.

Assessment Builder is packed with features that make creating quality local assessments easier than ever. Unlike other products, with Assessment Builder educators can create tests using their own content or by choosing from thousands of standards-based questions.

### Features:

100% Web Technology

Intuitive to Use

Easy to Access

SIF Compliant

### Functionality

**Varied Items:** Building quality local assessments requires asking more than one type of question. Some questions are more important than others. Assessment Builder solves both problems. Users have the option to include selected response and open-ended questions along with support for reading prompts. Users can also determine each item's importance by weighting questions.

**Online Assessment:** Add the OLA module for online assessment to build, implement, and score assessments completely online. The streamlined implementation and grading process saves time and increases teacher efficiency. The OLA server resides onsite for top notch performance and rock solid stability.

**Integration:** Assessment Builder integrates seamlessly with Performance Tracker. Together, these applications provide for unrivaled reporting and analysis capabilities. Aggregate and disaggregate data with ease.

**Web-Based:** Like the other products in the PerformancePLUS suite, Assessment Builder is completely web-based. Users can log in anywhere there is internet access, making vital assessment data more easily accessible than ever before.

**Stored Items:** Never worry about losing locally-created items again. Along with the ability to search for questions by standard and skill level, Content Library (included with Assessment Builder) stores questions as well. Save items and use them in the future. They will be displayed along with other items relating to the same standard or skill level, making it easy to quickly create standards-based assessments.

**Assessment Review:** Assessment Builder provides educators with a plethora of reports for assessment review, including standard and item level reports. Assessments can be researched and trends identified with interactive charts and graphs.

**Assessment Implementation:** With Assessment Builder, teachers can print personalized bubble sheets for each of their students on plain paper. The bar-coded sheets allow for easy electronic scoring and quick turnaround.

**Professional Support:** Assessments are only as good as the questions asked, providing the right software is only part of the solution. All of our education consultants have the experience and knowledge to provide educators with the tools and expert guidance to create and review local assessments.

Question 1: Which set of number cards below shows only odd numbers?

Options:
 

- A. 3, 9, 15, 27
- B. 3, 10, 15, 27
