

## Curriculum Connector

Curriculum Connector takes curriculum management to a new level. This visionary application makes it easier than ever for educators to develop and share a comprehensive, standards-based curriculum including units, lessons and assessments. Sharing ideas and concepts in Curriculum Connector helps teachers and administrators create a professional learning community where they can review, revise, and renew their ideas with ease.

### Features:

100% Web Technology

Intuitive to Use

Easy to Access

SIF Compliant

### Features

**Curriculum Design:** No longer are districts bound to a particular method of curriculum design by uncompromising software. Curriculum Connector includes flexible templates for curriculum design, giving educators the choice to design units using their chosen method (Curriculum Mapping, UBD, Learning Focused Schools).

**Lesson Planning:** A key component to successful curriculum design initiatives is teacher participation. Curriculum Connector makes it easy for teachers to create lessons from an existing curriculum framework. The lessons automatically populate the unit using a unique calendar-based lesson planner. This visionary approach eliminates redundant curriculum entry and increases productivity.

**Curriculum Reporting:** Built upon the TechPaths engine for curriculum reporting, Curriculum Connector provides quick and easy analysis of curriculum data. With this data in hand, teachers and administrators can have meaningful dialogue around the written and taught curriculum.

**Data Summaries:** Curriculum Connector provides educators with easy-to-read charts and graphs. These interactive curriculum reports give educators summary and detailed views of curriculum data.

**Aligned Content:** Using the unpacked standards available in Curriculum Connector, teachers can easily align curriculum content with just a few clicks. Aligning content makes it easy to see the standards that are being taught and those that are being missed.

**Connected Communities:** Building a professional learning community is easier with Curriculum Connector's built-in search feature. Educators can use the searchable database to view maps, units, lesson plans, and more inside or outside their own district. Included curriculum exemplars crafted by educational leaders exemplify best practices, guide curriculum planning, and save time. Educators can also share their own work.

**Web-Based:** Like the other products in the PerformancePLUS™ suite, Curriculum Connector is completely Web-based. Users can log in anywhere there is internet access, making vital curriculum data more easily accessible than ever before.

Curriculum Connector is part of PerformancePLUS™, an instructional management solution which helps administrators collect, analyze and interpret knowledge from curriculum and assessment data in order to make data-informed decisions at every level of the school district. PerformancePLUS™, BusinessPLUS™, eSchoolPLUS™, and IEPPLUS™ comprise PLUS Solutions™, a single, integrated student information, special education, instructional management, and business office system designed to help enhance the education of children.
